TCPIP Config(English)2

TCPIP 参数设置(中文)9

TCPIP Config(English)

Please update your demo, the version shown in the following picture is only for demonstration.

- 1) Connect the reader to the same computer network and open the demo software on the computer.:

The screenshot shows the 'RFID READER DEMO' application window. It has a menu bar with 'CONNECT(C)', 'LANGUAGE', 'RCP LOGGING(L)', and 'HELP(H)'. Below the menu is a 'CHOOSE INTERFACE' section with three radio buttons: 'SERIAL INTERFACE', 'NET INTERFACE' (which is selected), and 'USB INTERFACE'. Under 'NET INTERFACE', there are input fields for 'Remote IP' (containing '192.168.2.115') and 'Remote Port' (containing '49152'), along with 'Ping' and 'Broadcast' buttons. A large green text area contains several instructions under the heading '[ATTENTIONS]'. At the bottom, there is a table with two columns: 'Time', 'RCP Type', 'RCP Packet(HEX)' and 'Time', 'Current Status'. The status bar at the very bottom shows 'DISCONNECTED', the IP '192.168.2.115', the port '49152', a separator '---', and the text 'Status..'.
[ATTENTIONS]
1. Any problem of reader, please restore the factory settings,the steps are as follows:
[CONNECT->BASE SETTINGS->Default All->Set Para];
2. When connect the reader and get or set parameters, keep the reader silent (to prevent data conflicts);
3. When the reader is connected to the controller through the weigand interface or syris485 interface,
if the controller shows the same card number, please adjust the "Byte Offset" value:
WG26 usually set 9 or 5; WG34 usually set 8 or 4; Syris485 usually set 8 or 4;
4.EPC Number(Hex card): 01-02-03-04-05-06-07-08-09-10-11-12
Byte Offset=0, WG26 card number ="01-02-03",WG34 card number ="01-02-03-04";
Byte Offset=4, WG26 card number ="05-06-07",WG34 card number ="05-06-07-08";

Time	RCP Type	RCP Packet(HEX)	Time	Current Status
DISCONNECTED 192.168.2.115 49152 --- Status..				

2) Select "NET INTERFACE" and click on "Broadcast";

The screenshot shows the 'RFID READER DEMO' application window. At the top, there are menu items: CONNECT(C), LANGUAGE, RCP LOGGING(L), and HELP(H). Below these is a 'CHOOSE INTERFACE' section with three radio buttons: SERIAL INTERFACE, NET INTERFACE (which is selected and highlighted with a red box and an arrow), and USB INTERFACE. Under the NET INTERFACE section, there are input fields for 'Remote IP' (192.168.2.115) and 'Remote Port' (49152), along with 'Ping' and 'Broadcast' buttons. The 'Broadcast' button is also highlighted with a red arrow. Below this is a green box containing 'ATTENTIONS' and several numbered instructions. At the bottom, there are two tables for logging data: one for RCP packets and one for current status. The status bar at the very bottom shows 'DISCONNECTED' and the current IP and port settings.

------	----------	-----------------

Time	Current Status
------	----------------

DISCONNECTED || 192.168.2.115 || 49152 || ---- || Status..

This screenshot is similar to the previous one, but with the 'Broadcast' button clicked, which has opened a 'Net Config' dialog box. The dialog box has a title bar and a close button. It contains a 'Broadcast(F1)' button and a 'Config' button. Below these is a table with columns for 'T', 'IP', 'Mac', and 'Name'. The background application window is partially obscured by the dialog box. The status bar at the bottom remains the same.
